Teachers' Meeting at Galesburg, Ill., Oct. 17.—The members of the Military Training Association, which embraced a large section of central and southern Illinois, rounded up in this city today for their annual meeting. The sessions will continue over Friday and Saturday. The program provided for addresses by many well known educators and others, among them Superintendent Edgar B. Cooley of Chicago, Prof. Ed-

ward A. Ross of the University of Wisconsin, Charles A. Bennett of Bradley Polytechnic Institute, and Dr. Luther Halsey Gulick, head of the Russell Sage Foundation.

Apples! Apples! Apples!

A car of fancy Arkansas blacks, York Imperial and Ben Davis apples now on Santa Fe train track. Some grade as just closed out on Rock Island track last week. Martin Goostree, 297-60.

VALUE OF SILOS TOLD BY EXPERT

Profits From Use Declared Heavy by Speaker at Dallas Fair

Dallas, Tex., Oct. 17.—"Silos and Silage" was the subject of an address delivered at the Agricultural and Mechanical college booth by H. W. Williams, assistant state agent in club work. Mr. Williams in his address, said in part:

"We, as American farmers, are studying new methods and systems of farming in order to produce better crops and more feed stuff, which is absolutely essential to our advancement. While we are studying methods for producing more feed stuff, we should study some methods of saving the feed that we do raise. It has been said that a dollar saved is equivalent to a dollar made. If that is true, a pound of feedstuff saved is equivalent to producing a pound of feed. It is far better to cultivate eight acres of feedstuff and have every pound of it than to cultivate 12 acres and have only about two-thirds of the crop.

The silo has come to solve the proposition of saving feedstuff to a great extent. A silo is just a barn built in a circle for the purpose of saving feed. They are, as a rule, constructed about twelve to twenty feet in diameter and from 26 to 40 feet in height, the height about twice the diameter, and filled with some forage crop. For example, green kafir corn, Indian corn and so forth is harvested while in good fodder pulling stage or dough stage, and is run through a mill and cut into small pieces one-half or an inch in length and conveyed into the silo through the top. The silage should be packed well in order to force out as much of the air as possible. The secret of putting up silage is to have the silo air tight and the silage packed well.

When a silo is filled the silage will go through a heat or sweating stage, bleed a little from the green color, take on an acid or sour taste, and remain in that condition. Of what value is silage, is it good to feed to our stock? It is a known fact that when the grass rises in the spring milk cows will pick green succulent grasses they eat. When winter comes and they are put on dry feed they fall off in milk flow and very often go dry, due to being cut off from their green, succulent feed. Silage fed in the winter to milk cows keeps them giving milk just as if they were running on a green pasture.

"Of what value is silage in dollars and cents? The feed value of silage is about \$355 per ton. There is never a year but what we can grow at least eight tons of green corn per acre, which means about \$2800 worth of food to the acre.

"There are many different types of silos. You can very easily group them in two general classes: wooden silos, and solid silos, such as those constructed out of concrete blocks, stone, hollow tile, etc. We also find the underground cistern which makes a very cheap silo. There are many objections to this type. The silage is easily gotten into it, but it is a very difficult task to get it out, due to the silage being heavy and bulky, weighing about 40 pounds per cubic foot. Unless we can get some convenient mechanical device to hoist the silage, it is not a very desirable silo, and for that reason you find them as a rule built above the ground. "The stave silo is the principal type of the wood silo. It is constructed out of long staved staves and bound together with heavy iron hoops about 5-8 inch in diameter, similar to an up-ground wooden cistern. A stave silo should be put on a good concrete foundation, and a series of doors put in one side for the purpose of removing the silage. The essential thing to remember in putting doors in a silo is to make a door that will fit the space left for it. If it fits tight and close the pressure of the silage will keep the door closed and exclude the air. Another important thing to remember is to anchor the silo well. Use six or eight good anchor wires and fasten them off some distance from the base. An anchor wire run off some distance has a great deal more effect than one run into the ground a few feet from the base. When the silo is empty the hoops in order to prevent the staves from becoming loose. When the silo is refilled the hoops should be loosened slightly. Unless the hoops are loosened up the staves will swell and break the hoops or push out the staves."

Notice to Contractors

Bids will be received by the Lubbock State Bank at Lubbock, Texas, for the demolishing of old walls of their present bank building and reconstruction same with brick, stone and marble. Building 50x100 feet, two stories high. A certified check for \$100 must accompany each bid. Bids must be in by October 25, 1912 at 4 o'clock P. M. Plans on file with Henry Mount, architect, and it will be necessary to come to Lubbock to thoroughly understand work.

Cole's Odorless Broiler for Steaks, Chops and Game

Think of being able to have a fine broiled steak, containing all the flavor and juices, broiled in your own home on Cole's Hot Blast Range. The only range made on which you can have this Broiler Attachment.

All the smoke and odor from broiling goes into the range and up the chimney. None escapes into the room.

Its cleanliness adds greatly to the value of the range.

Broiled steaks, chops, fish or any kind of game can be broiled to perfection, using this range.

Date of Demonstration October 15th to 19th.

Remember, the 14 Special and Patented Features embodied in Cole's Hot Blast Range are features of convenience.

Come and bring your friends—see this range in operation.

For Soft Coal, Hard Coal, Slack, Wood or Lighter Fuel.

H. C. LANKFORD FURNITURE CO.

Everyone is invited. All are welcome.

WHY?

One of our salesmen called our attention a few days ago to the number of High Grade Ranges we were selling lately. This caused no surprise to us but indicates that the people of Amarillo want the very best and know where to get it.

A MAJESTIC or QUICK MEAL Range settles the stove question for an ordinary life-time and it is a safe bet that you can come back year after year and find the same lines handled by this house. Is there any satisfaction in that kind of insurance?

That's why they buy the best.

Morrow-Thomas Hardware Co.
